

FACE & BODY LIFTING

For a firmer and smoother skin

OVERLINE
ITALIA

BIPOLAR MULTIPOLAR AND FRACTIONAL R.F. FACE

RF FACE

Xilia Face Fractional RF
CODE 865

Xilia Face & Body Fractional RF is designed to treat all imperfections of face, neck and décolleté. It combines Bipolar Radiofrequency, Multipolar Radiofrequency and Fractional Radiofrequency, three effective methods to regenerate and revitalize the skin, giving it a boost of youth. Fractional Radiofrequency, specifically, allows to perform treatments on more consistent aesthetic issues. With Xilia Face Fractional RF the face lights up, the texture appears firmer, wrinkles and signs of expression are reduced, while the oval and décolleté regain their tone. Results that are visible immediately and remain for a long time.

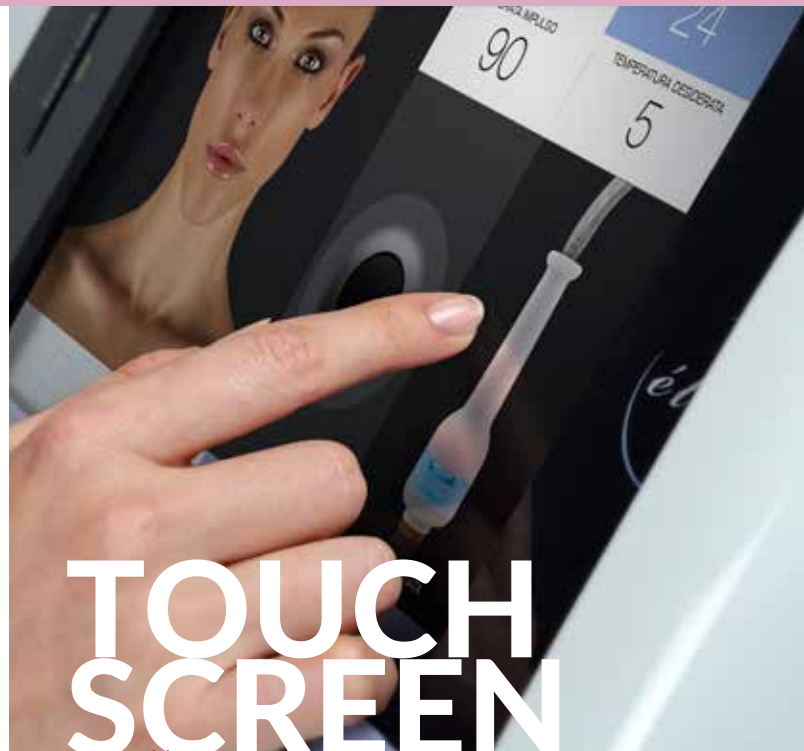

The equipment is compact to fit into any environment. Use is simple and intuitive thanks to the touch screen monitor that offers a quick and widespread consultation of programmes and treatments. The application is safe and painless for maximum customer comfort.

WIDESPREAD CONSULTATION
OF PROGRAMMES AND TREATMENTS

FRACTIONAL R.F. 37pin

specific for wrinkles

The circular effect handpiece designed by Overline laboratories allows to concentrate the action of Fractional Radiofrequency obtaining excellent results on wrinkles from the first sessions.

FRACTIONAL R.F. 12pin

specific for stretch mark

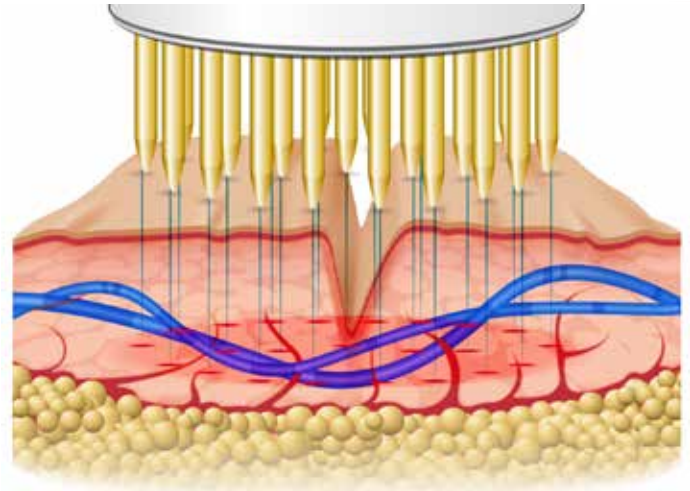

The specific applicator creates a targeted action, focusing the action directly on the stretch mark, for the reconstruction of the tissue fibers of the dermis.

FRACTIONAL R.F.

deep action

The Fractional RF induces a uniform increase in temperature at the level of the dermis, resulting in a thermal action on the Collagen fibers, allowing to rebalance both superficial and deep ones reorganizing the lines of skin tension in a physiological way. Such actions result in the neosynthesis of Collagen, with progressive increase in dermal density. Fractional RF is a Radiofrequency system able to combine the resistive thermostimulation for the plastic remodeling of the dermis with the correction of texture irregularities, thus leading to a full thickness rejuvenation of the skin.

BIPOLAR R.F.

regenerating action

This treatment with an extraordinary lifting effect counteracts skin relaxation. By raising the temperature of the existing connective tissue and, through heat, activating the fibroblasts to produce new Collagen and new Elastin, it allows to mitigate wrinkles and signs of aging, rejuvenating the face, for a completely natural firming and relaxing effect on tissues.

MULTIPOLAR R.F.

anti-age action

This treatment acts through the increase of the subcutaneous temperature that causes the denaturation of the proteins of the Collagen, giving rise to a reorganization of the lines of skin tension. Moreover, it activates the fibroblasts that, as a result of the thermal insult, increase over time the production of Collagen and Elastin with a consequent increase in the consistency of the dermis.
